Keyword Index

3D finite element method, 159

adaptive refinement, 159
aluminium structures, 143

calibration, 187
cellular automata, 25
civil engineering, 75
co-rotational approach, 97
coevolutionary design, 25
complexity, 1
conceptual design, 49
concrete filled tubular, 119
construction, 75

dependability, 1
distributed computing, 75

Eurocodes, 143
evolutionary computation, 25, 49
evolutionary design, 25
evolutionary strategies, 49
expansive soil, 187

finite elements, 97, 143

generative representations, 25
genetic algorithms, 49
geometrically nonlinear analysis, 97
grid computing, 75
grid middleware, 75
grid technology, 75

high performance computing, 75
high strength concrete, 119

instrumentation, 187

load perturbation, 97

mass consistent wind model, 159
mesh generation, 159
mesh smoothing, 159
mesh untangling, 159
moisture sensor, 187
morphogenesis, 25

Newton-Rapson method, 97
non-linear finite element analysis, 119
numerical models, 119

organization, 1

pavements, 187
pressure cell, 187
problem solving, 1

shell buckling, 143
shell structures, 97
shrink and swell, 187
state-of-the-art, 119
strain gauge, 187
structural analysis, 1
structural design, 1, 25, 143
systems, 1

triangular finite elements, 97

visualisation, 49
